PROFESSIONAL SUMMARY

Product Designer with an engineering background specializing in enterprise SaaS, AI-assisted experiences, and healthcare operations. Experienced in designing complex B2B products, role-based enterprise workflows, operational dashboards, and scalable design systems. Passionate about transforming complex business problems into intuitive digital products that improve operational efficiency, support data-driven decision-making, and deliver measurable user value.

PROFESSIONAL EXPERIENCE

UI/UX Design Intern | Aidly

June 2026 – Present

AI-Assisted Hospital Operations Platform

- Designed an AI-assisted healthcare operations platform that centralizes hospital administration, operational monitoring, and clinical resource management into a unified system.
- Created a real-time command centre that enables administrators to monitor patient admissions, bed occupancy, workforce availability, operational alerts, financial metrics, and hospital performance from a single interface.
- Designed role-based experiences for Administrators, Managers, Receptionists, and Doctors to streamline daily operational workflows across departments.
- Defined AI-assisted decision-support experiences that identify operational bottlenecks, prioritize critical incidents, and recommend actions to improve hospital efficiency.
- Designed workflow automation for approvals, patient admissions, bed management, appointments, and operational notifications to reduce manual coordination.
- Established a scalable healthcare design system with reusable components, accessibility standards, and consistent interaction patterns for future product expansion.

Freelance Product Designer | Confidential Community Platform (NDA)

March 2026 – June 2026

- Designed 100+ production-ready iOS screens across six interconnected modules for a live community operations platform.
- Built a scalable design system with reusable components, typography, spacing tokens, and interaction patterns.
- Designed role-based workflows across security, appointments, messaging, payments, and community administration.
- Translated 240+ pages of product requirements into developer-ready UX specifications and interactive prototypes.
- Collaborated across UX research, information architecture, prototyping, and developer handoff.

UI/UX Design Intern | Landmine Soft

January 2026 – March 2026

CORE EXPERTISE

Enterprise Product Design • Dashboard Design • UX Research • Information Architecture • Interaction Design • Design Systems • AI-Assisted Product Design • AI Workflow Design • Prompt Engineering • Decision Support Systems • Workflow Automation • Human-AI Interaction • Working knowledge of Model Context Protocol (MCP)

TOOLS

Design: Figma, FigJam, Google Stitch
AI: ChatGPT, Claude, Gemini

EDUCATION

B.Tech – Civil Engineering | Tirumala Engineering College-2022
